[Internet architecture]

4G sim card communication

4G sim card

Dynamic Numeric Interface

World map: Easy to manage and control the equipment installed by users around the world(You need to apply for Google API Key by yourself)

Alarm function

Alarm inquire: It has the function of screening and inquiring alarms at each point, trend graph comparison function, and can mark alarm types/remarks/personnel sign-off functions

Dashboard: Provide users with the freedom

to design a graphical interface.

Alarm statistics: Count the top

ten channel alarms, and provide

detailed inquire function

LINE group management: Instant time data

alerts and image notifications

(disconnection/network disconnection/data alerts), dynamic trend chart LINE sharing (can conduct online data analysis and discussion)

Data sharing

It can be uploaded to other servers

through three methods:

= 28-29

JSON/HTTP/MQTT. Users can edit the

upload format content by themselves.

Web page function

Rights management function: View the corresponding functions/channels according to the rights planned by rights management, and there is an account and password recording/deletion function that can be clicked to quickly log in to the platform
