

[Features]

- Supports simultaneous installation of multiple water quality sensors, enhancing measurement flexibility and application range.
- Can be directly placed on the water surface for use, with no complicated construction required for installation.
- Effectively secures sensors at a designated water depth, improving measurement stability and consistency.
- Features a waterproof float body and weather-resistant materials, suitable for long-term outdoor water environment applications.
- Internal space allows proper cable management, reducing the risk of external pulling and damage.
- Modular structural design enables convenient on-site installation, disassembly, and future maintenance.

[Applications] Suitable for various environments such as fish ponds and rivers.

[Optional Code]

WSF-Code 1

Code 1	Number of sensor installations
1	1 unit
2	2 units
3	3 units
4	4 units

※The side of the enclosure is fixed with cable head.
